

HYDRAULIC PICKING LORRY HPL-1

Picker is harvesting the third level in stand-up position. The shown picking tray is adjustable to customer demand.

Hydraulic picking lorry PL.030

The hydraulic picking lorry is specially designed for the fresh mushroom industry. It is mainly made of stainless steel and produced from high quality materials. The machine enables pickers to harvest all growing bed levels. The first and second level is picked sitting down, the rest of the levels in a stand-up position. The platform is adjustable in height by hydraulic pistons. The driving speed is adjustable by the picker. By using this machine, your picking rates as well as the quality of the picked mushrooms will improve. This lorry is very useful in growing rooms with limited space.

The lorry control keyboard is specially designed for the Limbraco picking lorry and trolley. This keyboard is equipped with a display for reading actual speed, real-time battery capacity , parameters etc.
